

Cultivation and protection of crops from the air

- Aerial spraying by plane and helicopter
- Aircraft maintenance
- A fleet of 15 aircraft
- Experienced pilots and mechanics
- Based in France, operations in Africa, mobile sites around the world

Experts in aerial application and aircraft maintenance since 1973

Operating in Africa, French Guyana and Guadeloupe since 1973

Crops and services

Aerial application is used for crops of rice, corn, bananas, soya beans, sugar cane and fodder crops.

It can be used to **sow** rice and **apply crop protection products** – solid fertilisers, liquid fertilisers, herbicides (tillage), insecticides, and fungicides. It can also be used to **help combat diseases** such as malaria and control invasions of pests such as locusts.

Our team

We have a team of **fifteen aircraft and helicopter pilots** specialised in aerial spraying, as well as **seven expert mechanics**.

Save valuable time

We can set up an airstrip anywhere it is required, unrestricted by human or material resources, for punctual or regular operations. In one day of spraying, we are able to do the work of a dozen tractors with just one pilot and one plane, **saving valuable time.**

Our fleet

Our Piper PA25-235 are agile and lightweight. With a 480 kg load capacity, they are equipped for spraying fertiliser and granular fertiliser as well as liquid crop protection products.

Loaders

Our mixers and loaders are designed and made by our teams, combining respect for the environment, operator safety, portability and usability.

Protecting crops with precision application and tracking

Rapid response and precision

GPS tracking guarantees controlled application and considerable precision. The products used are supplied by our clients in accordance with the norms in force in their country. Guidance and flow control technology reduce the amount of product used, increase performance and minimise the impact on the environment.

Mobile sites and base in France

Maintenance

From our workshop specialised in the ***maintenance and servicing of Pawnee Piper PA25 aircraft***, we work as a subcontractor for all types of aviation companies. We offer services in mechanics, covering, welding, sheet metal work, metal work and painting.

R&D

Our ground crew are continually working to develop new solutions to improve the precision, efficiency and performance of our services, including the mobility of our work sites, the creation of airstrips, aerial imagery and spraying systems.

The company's headquarters in France house our administrative services as well as a 1500 m² workshop approved by the French Civil Aviation Authority. The company holds a certificate of approval for the application of crop protection products.
